DETAILED ACTION

Priority

Acknowledgment is made of applicant's claim for foreign priority based on applications 0002215.2 and 0019888.7 filed in the United Kingdom on January 31, 200 and August 11, 2000, respectively. It is noted, however, that applicant has not filed a certified copy of those applications as required by 35 U.S.C. 119(b).

Election/Restrictions

It is noted that claims 8-12, 14 and 25 all currently depend from claim 1, and thus the restriction requirement of January 7, 2005 is no longer applicable. Thus, claims 8-12, 14 and 25 are hereby rejoined.

Allowable Subject Matter

Claims 1-4, 8-14 and 18-27 are allowed.

The following is an examiner's statement of reasons for allowance. Applicant's arguments filed June 18, 2009 are found to be persuasive. It is noted that the prior art does not teach or suggest the combination of inserting a marker DNA sequence in target DNA sequences, expressing the amino acid sequences, and immobilizing in a single step two or more amino acid sequences from lysate, wherein marker moieties of the amino acid sequences are attached to the support in an array. It is noted that Morin

et al. do not teach or suggest that different types of proteins, produced by the claimed labeling method, are immobilized in a single step in an array, or from lysate or otherwise without prior purification. Also, Chin et al. do not teach or suggest that different types of proteins, produced by the claimed labeling method, are immobilized in a single step from lysate in an array, or otherwise without prior purification.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Valkirs, 5,914,241, disclose antibodies tagged with tags for capture on a solid phase using receptors for the tags in discrete zones so the antibodies can be separately detected. (There is no disclosure of capturing from lysate multiple different labeled antibodies in a single step, or otherwise capturing multiple different labeled antibodies without prior purification; nor is the labeling method the same as Applicant's claimed labeling method. It is also noted that this Valkirs disclosure is not a method for generating a protein array for subsequent binding with analytes, but is rather the binding assay itself.)
